

April 28, 2014 – Press Release n°1

Alterenergy workshop in Castellalto

On 2nd May 2014 will be hosted the final workshop in Castellalto.

Our primary expectation is the wider involvement of the partnership to define the list of the Strategic object.

The objective is to supply local administrators, citizens, and local businesses with assistance in developing skills and competences in the energy sustainability field.

Abruzzo Region organized in Castellalto this workshop with the aim to lead to an appropriate level of information and interaction between institutional and local realities.

The objectives of the project are the following:

- To involve a group of stakeholders as part of the key sectors in order to have a representative structure of the community that covers all the main areas of interest;
- To inform the stakeholders on the “ALTERENERGY” Project, its goals, its approach and its potential outputs for the area of intervention in terms of the possibility of regeneration, from an urban, social and economic point of view;
- To create interactive thematic workgroups with representatives of different domains (local and regional authorities, research sectors, private investors etc..)
- To identify the most pressing problems, comparing them with the results of the desk analysis and carry out the first possible actions and lines of strategic interventions.
